Liang-Shih Lin | FULL STACK WEB DEVELOPER

3rd flr, no. 14, Xindong Str, Songshan District, Taipei, Taiwan, ROC, 105

cell: +886965423311 | email: liangshihlin@gmail.com

Professional Profile

- I am a dedicated and hardworking individual with a proven ability to work on my own initiative to ensure that demanding deadlines are met, and customer expectations are maintained.
- I am highly self-motivated, curious and enthusiastic about learning something new, hence the reason I chose this field as my profession.
- I can provide skills that can improve overall teamwork, product quality, attention to detail, and problem solving.
- I am now eager to secure a long-term contract where I can provide considerable expertise and knowledge whilst also enabling my continued professional development.

Career Summary

Full Stack Web Developer, Linux System Administrator | Gyro Systems Inc.

September 2018 - Present

During this time I have worked on a number of projects. These projects are meant to be used in semiconductor production factories to create a "Total Solution" in which we cover the enter factory, all equipment are provided by us.

Key Achievements

- Mentoring new employees.
- Become a Project lead allowing me to work with a new colleague, showing him the ropes, distribute work, and set deadlines.
- Learnt how to better improve my programming skills to increase efficiency when scaling up the system and work in an environment where internet access is limited.
- Learnt how to improve my client relations.

~

Full Stack Web Developer | Freelance

April 2018 - May 2018

Created a full stack system for Takopos which can generate a QR Code that can be printed and stuck onto certain merchandise for customers to have better understanding of the product including advertisements.

Key Achievements

- Understanding the client's needs to create the product that they want.

~

Frontend Developer | Cedar House

January 2016 - December 2016

During my last year of varsity, one of our lectures entail us finding a client and building a system based on their specifications. In my group there are 6 members, 3 of them are developers and the other 3 work on client relations and documentation. I work with 2 other developers to create a system that will do an inventory check at this private college to keep track of all MacBooks by scanning their QR Codes.

Key Achievements

- Working together with other members to create a full system.

Hobbies & Interests

With my curious personality, I enjoy learning about new technologies that can improve my workflow efficiency or technologies that can help me create something interesting. I love singing, I used to sing in the choir at school and currently taking vocal lessons. I thoroughly enjoy exercising, currently doing calisthenics as it helps me through the day by giving me energy to finish my work.
